PHASE 1: Foundation		PHASE 2: Core Systems		PHASE 3: Framework		PHASE 4: Outfitting		PHASE 5: Load Stage	

How to Read the Document:

Recycling Value Index

What it is:
A quick Δ% showing how much value you gain or lose if you recycle an item instead of selling it.

How to use it:
Green ▲ Positive % Recycling returns more value than selling.
Red ▼ Negative % Recycling returns less value than selling.

Pattern you'll notice: High-priority components tend to carry a big penalty (-40% to -60%). Low-priority items are often only -10% to -25% decreased value.

$ROI\% = \frac{Recycle\ Value - Sell\ Value}{Sell\ Value} \times 100$

1x Synthesized Fuel	700
1x Oil	1 x 300 = 300
1x Chemicals	1 x 50 = 50
Total	350

700 - 350 = -50%

Component Cards

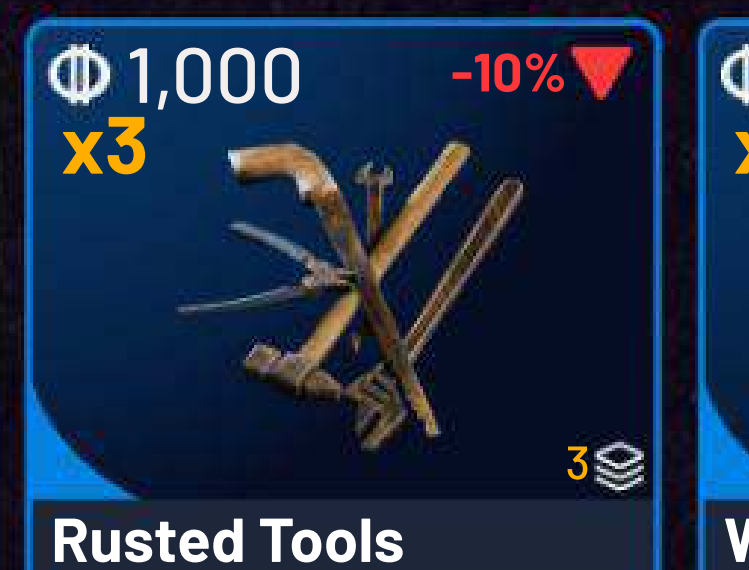

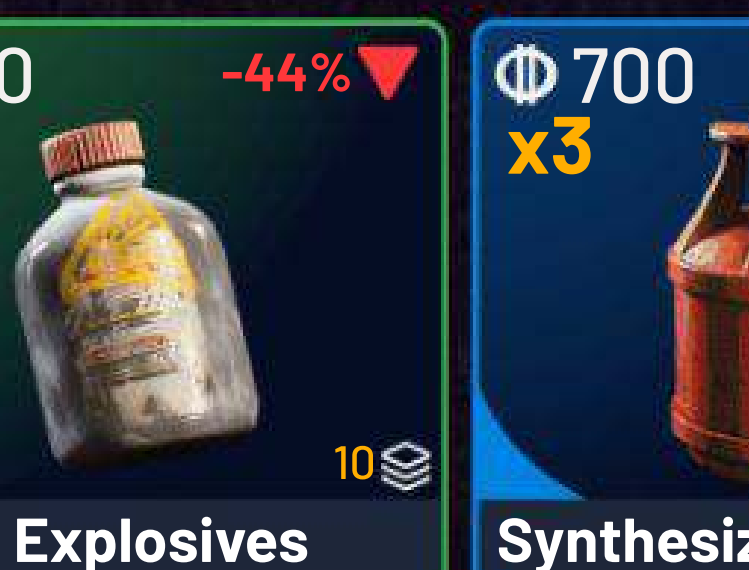

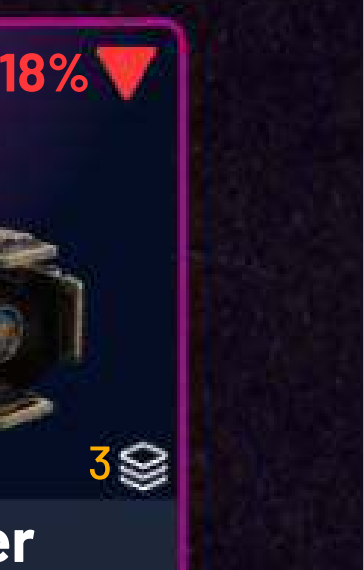

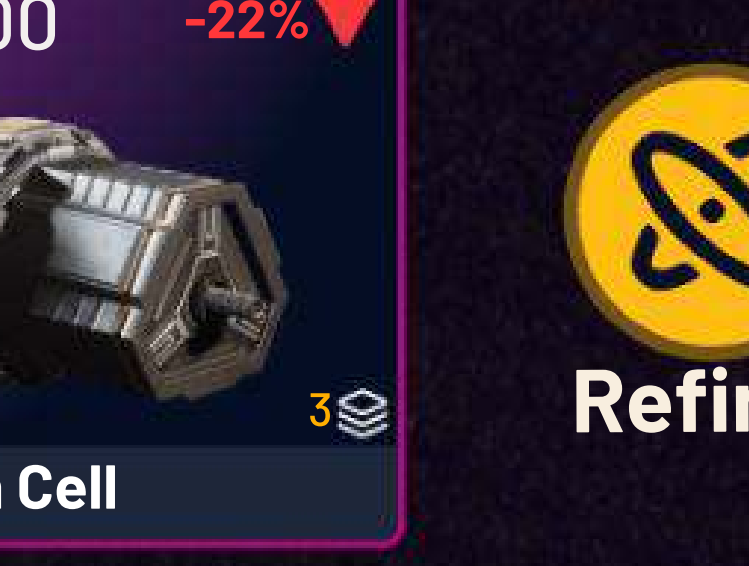

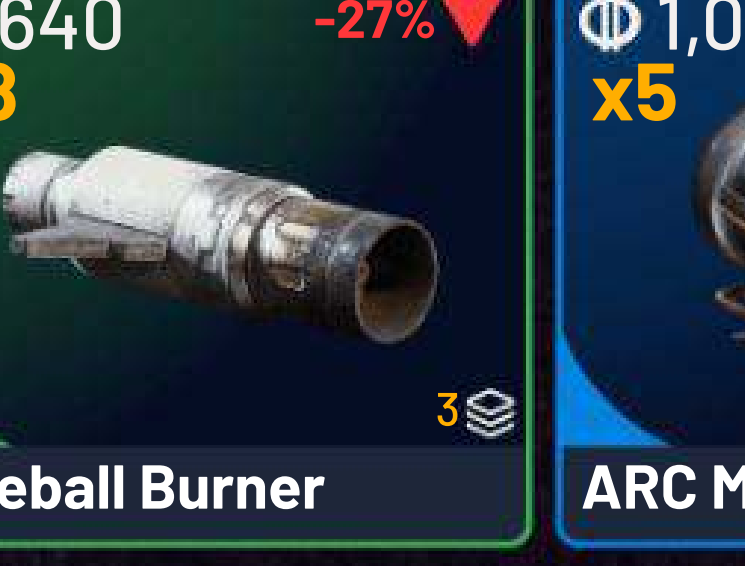

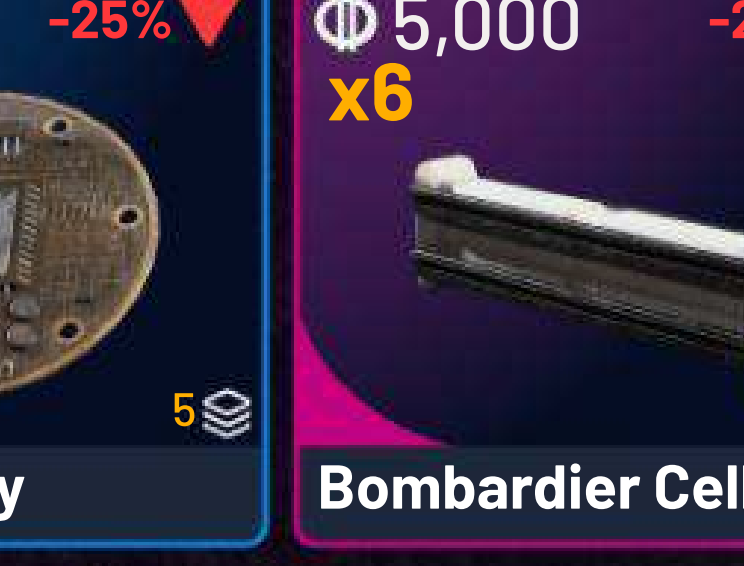

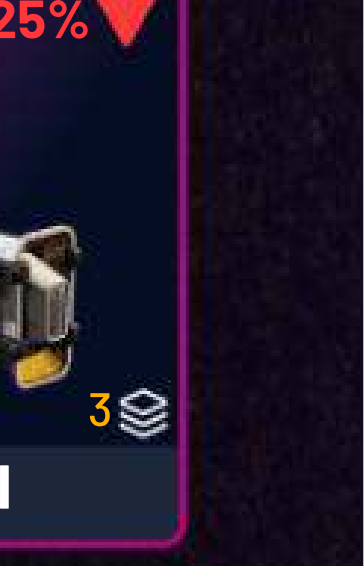

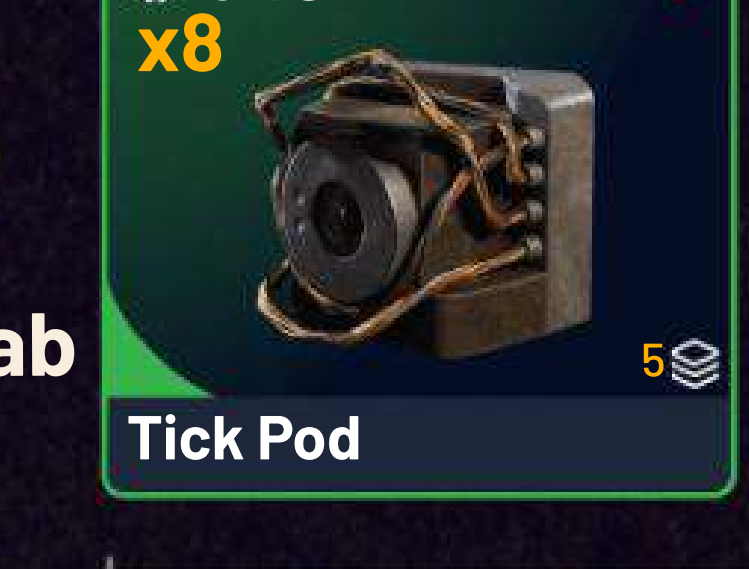

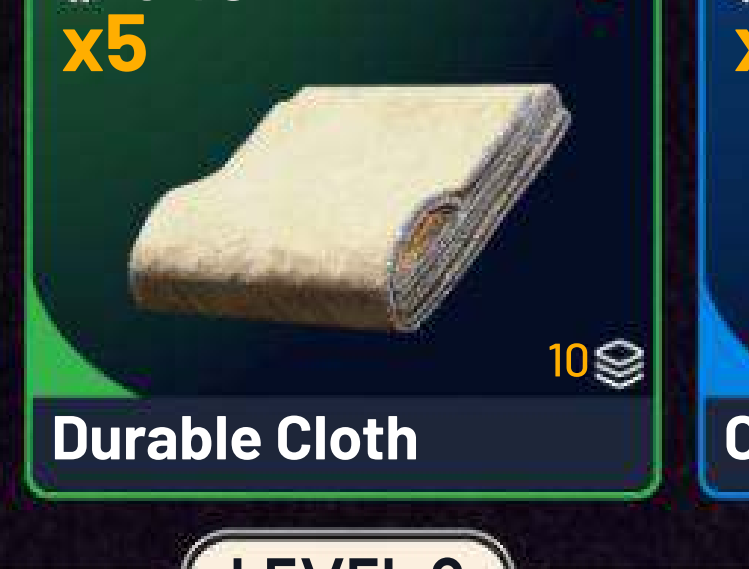

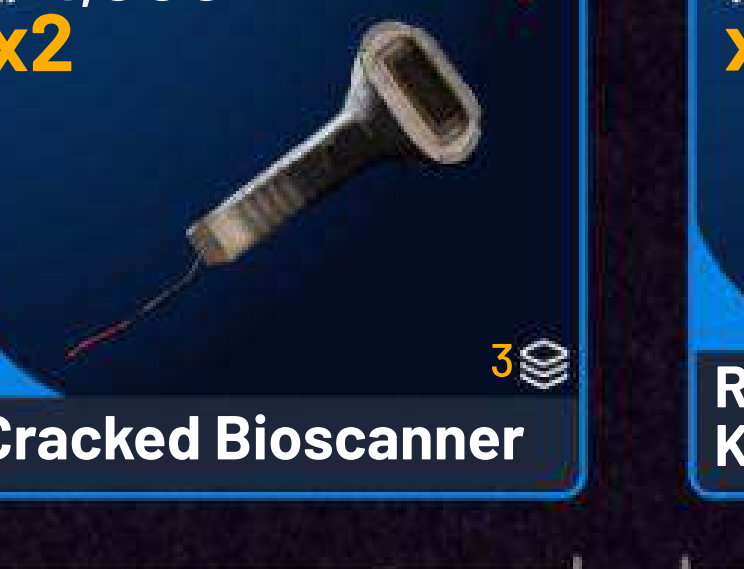

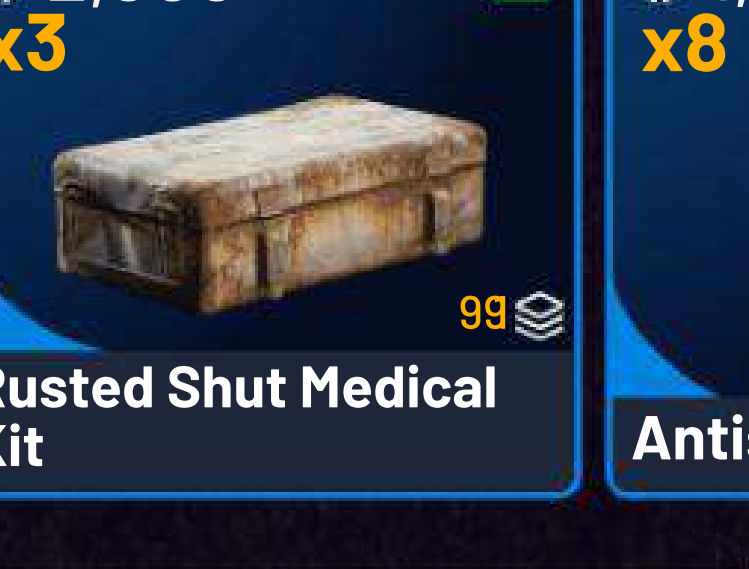

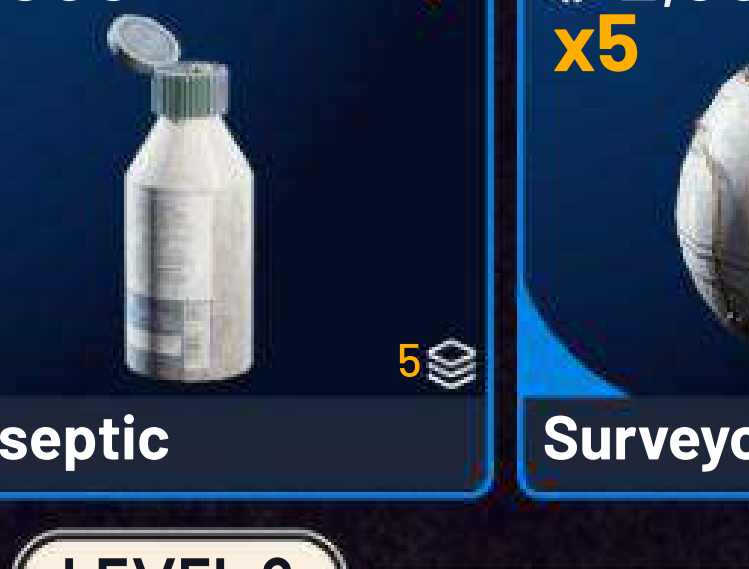

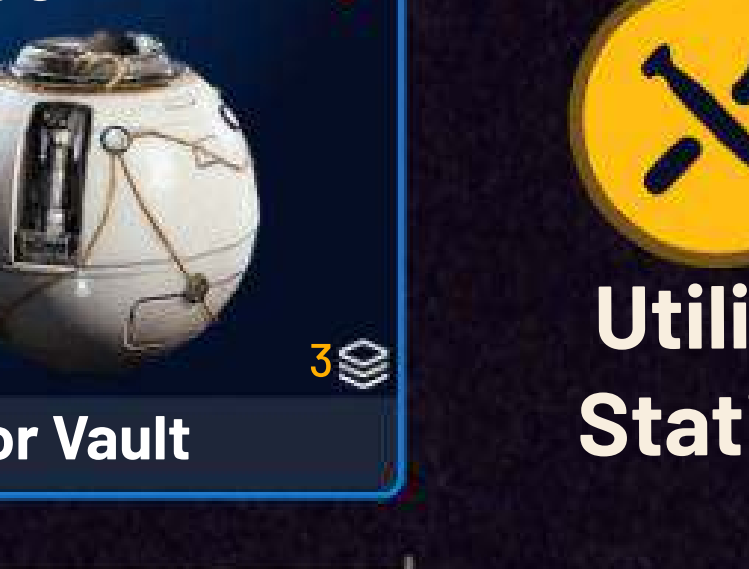

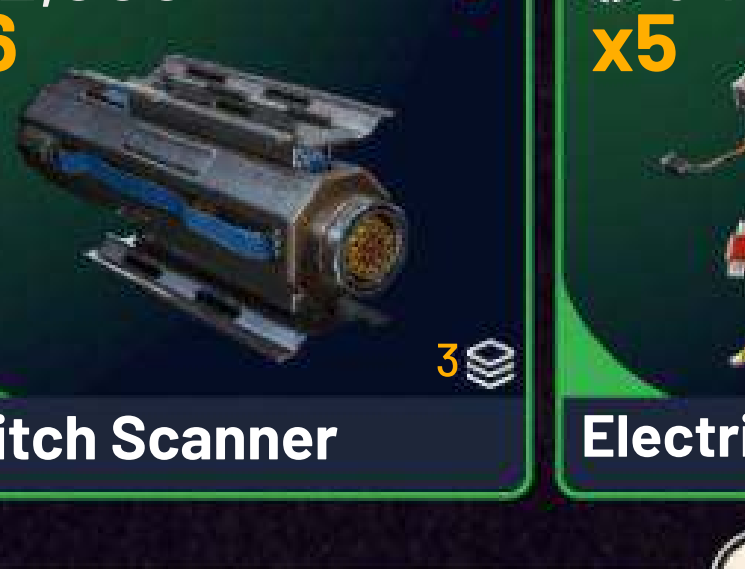

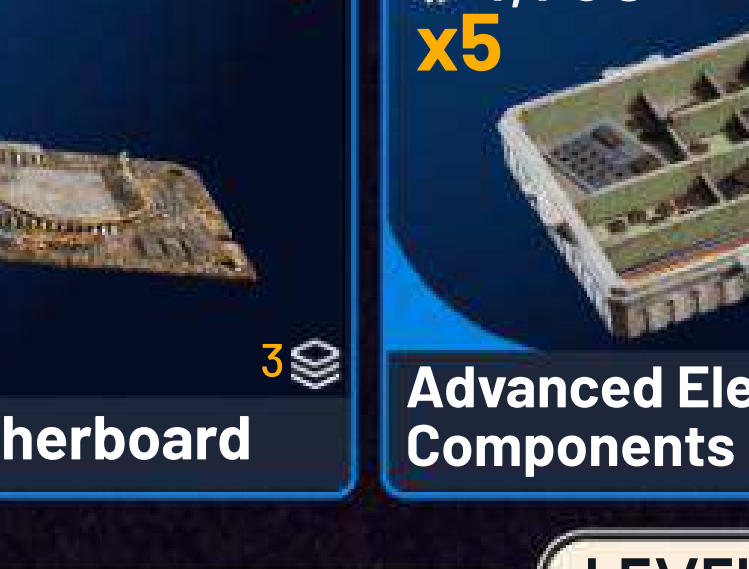

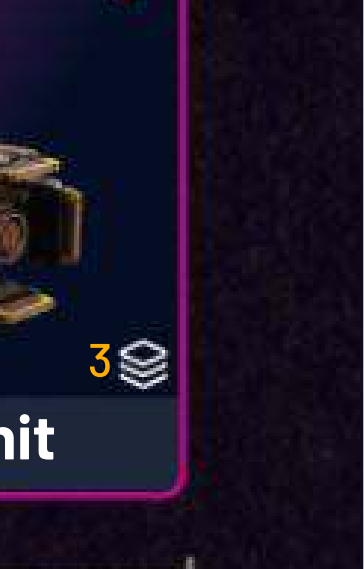

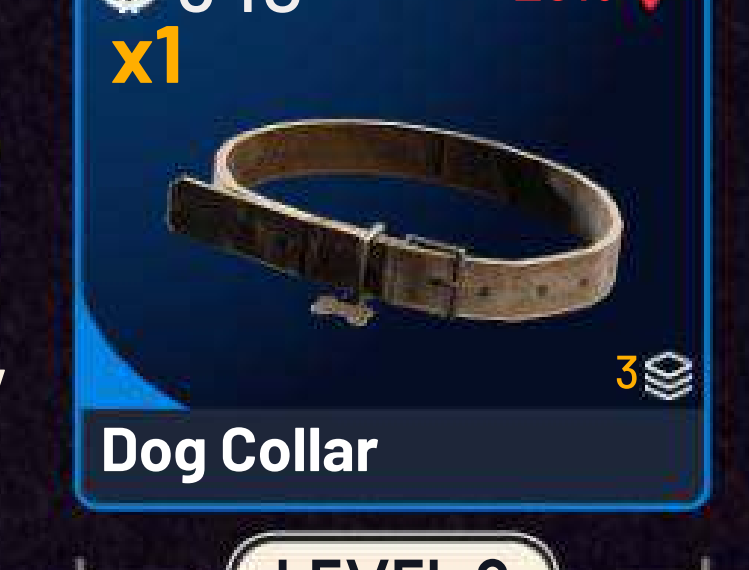

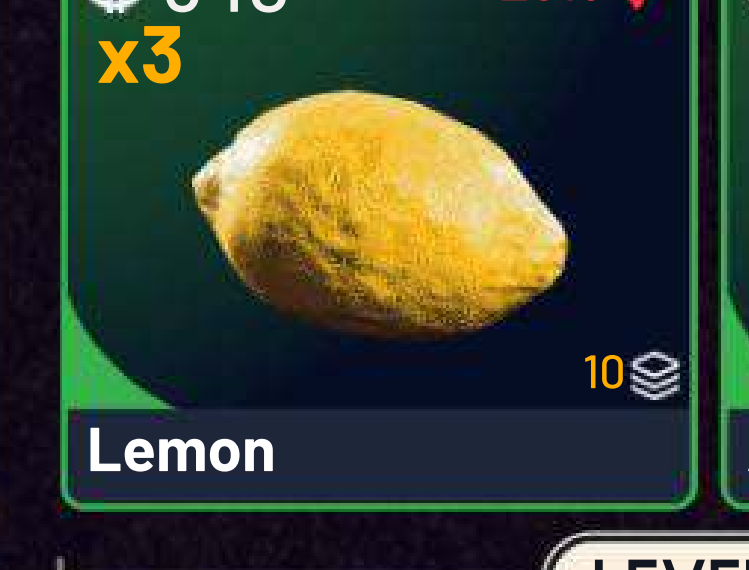

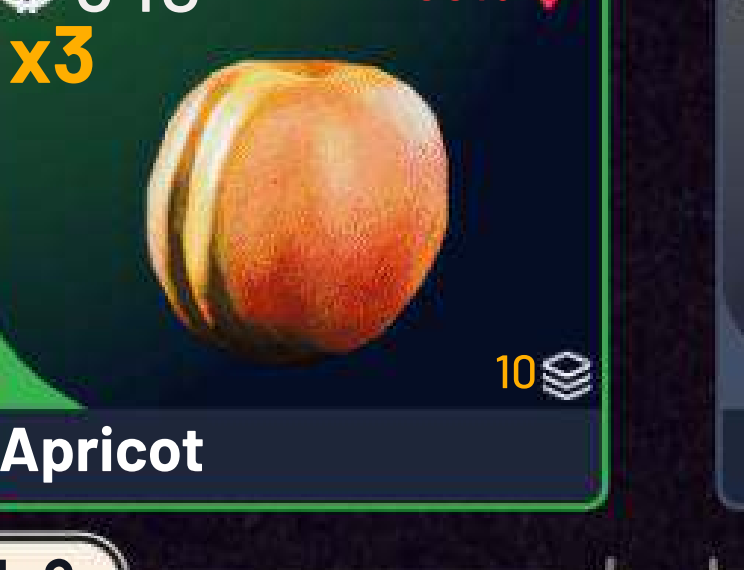

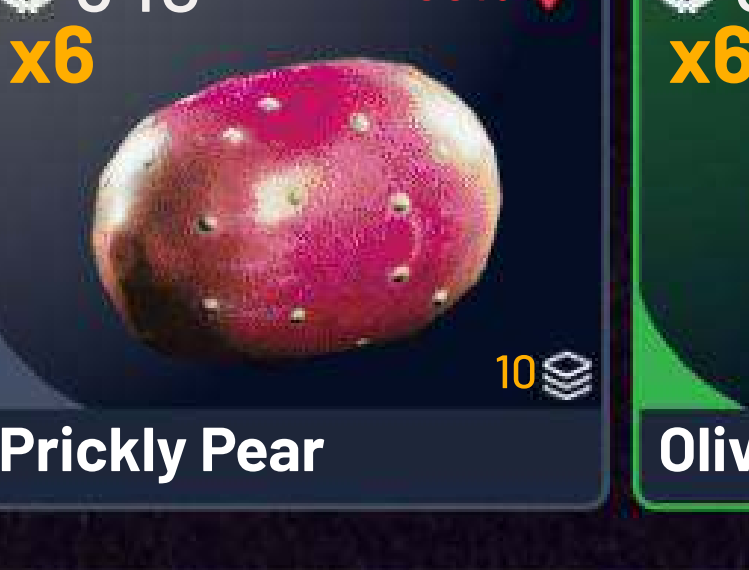

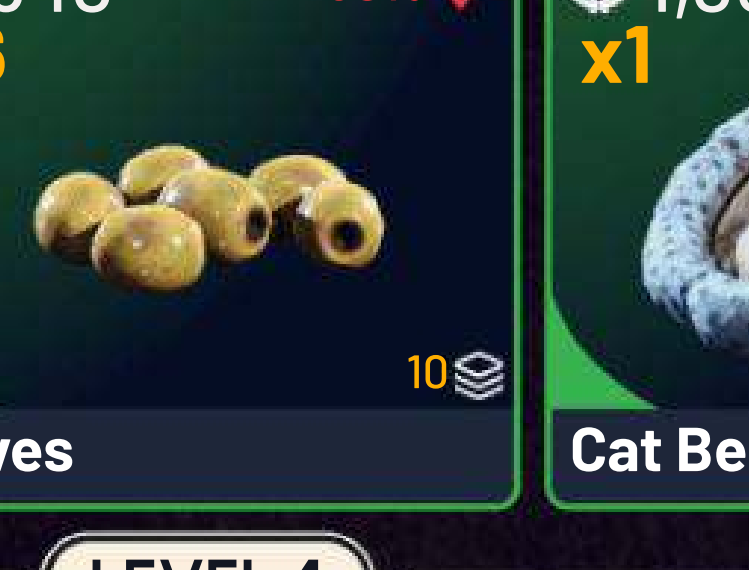

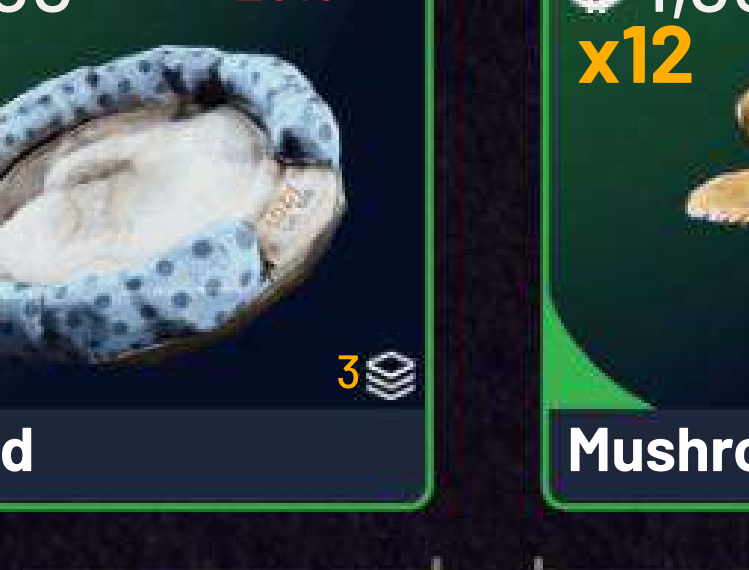

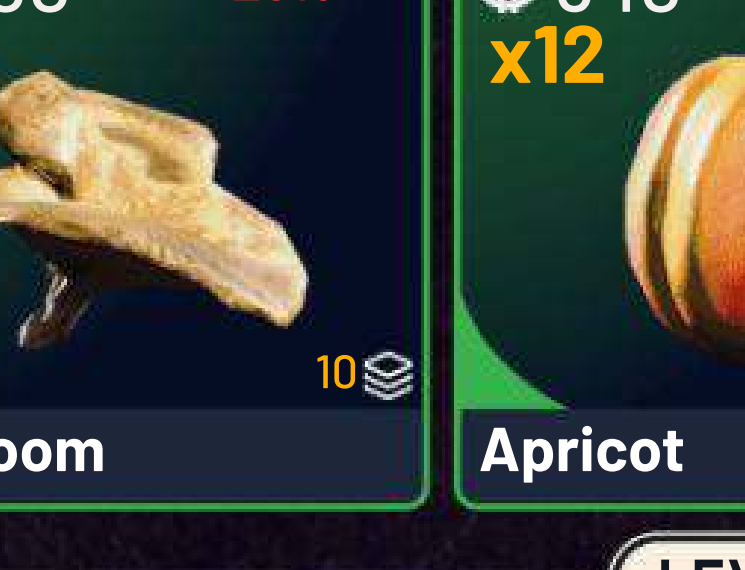

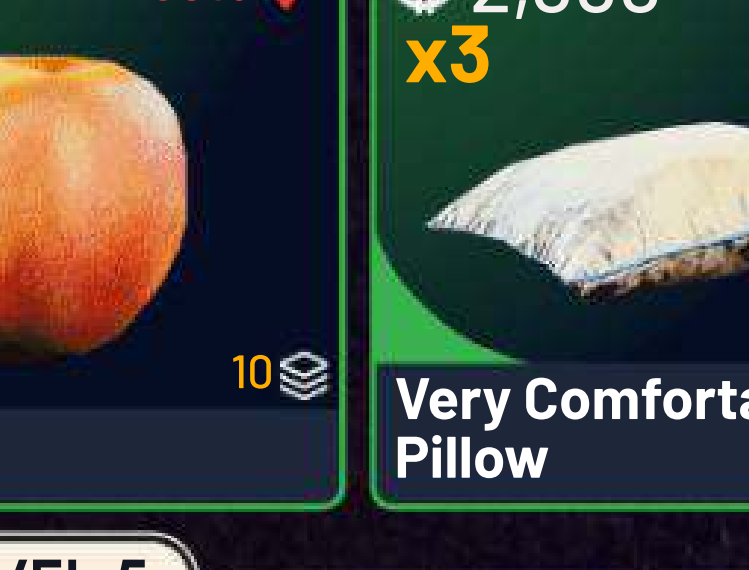

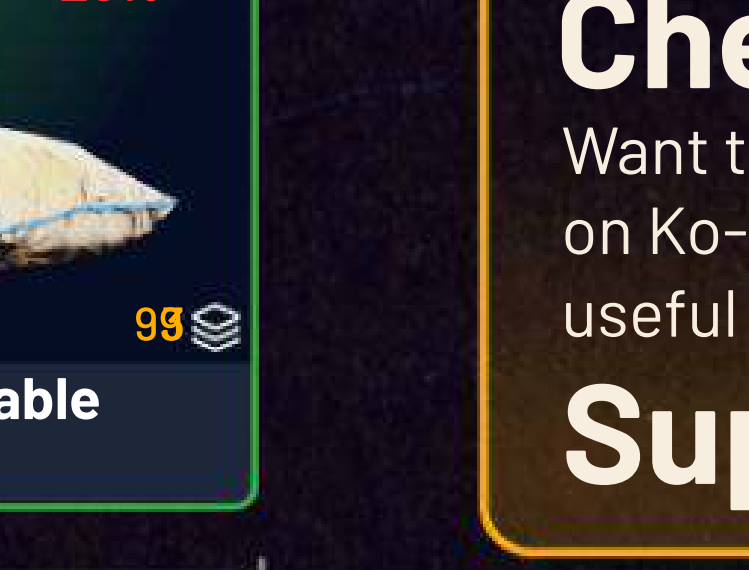

Sell value
